PORT COMPLIANCE: ISPS CODE

PUBLIC NOTICE

The security of ships and port facilities is a critical aspect of the port function and operation at the international sea port of Honiara and Noro. In early 2005 a security master plan was developed as a requirement of the International Ship and Port Facility Security Code (ISPS Code). The port security plan was approved and a first audit of the port facility was conducted by experts from South Pacific Commission (SPC). In July of the same year, the Port of Honiara and Noro were both declared as ISPS Code compliance ports.

To ensure continuous ISPS Code compliance ports, the Port Facility Security Officer (PFSO) regularly inspects and audits the port facility, berthing vessels and also imposes other security measures as outline in the port security master plan.

Through such stringent security actions, the Port of Honiara and Noro are now both safe and secure port for all international shipping lines.
